

1. Unauthenticated user provides 3rd party credentials to Thrift client (web app).

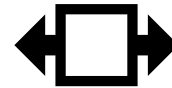

Web App

3rd Party Server

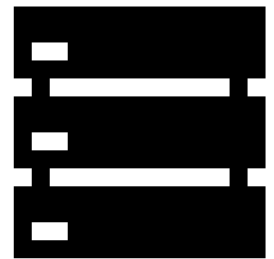

2. Web app calls 3rd party authenticator to acquire UserID

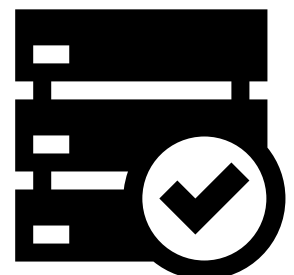

UserID

3. Web app sends UserID, Authenticator Type and password to Koverse Server to authenticate credentials.

4. Koverse Server evaluates the 3rd party service response and accepts the delegated authority if passwords match.

5. Koverse Server stores the third-party UserID and associates it with a Koverse user ID to be used internally, and returns the authenticated user session.
